## CONTENT

**Technical science**

*Bulgakov I.S., Sekisova I.A., Teryekhin E.P.* Investigation of the dependence of the coefficient of hydraulic fluid friction ($\lambda$) on the Reynolds number (Re) with respect to hydraulic drive ........................................... 5  
*Vasin V.V.* Automated supervisory, reporting and control system (ASRCS) for shovel operation: introduction and operation experience, improvement prospects ................................................................. 11  
*Voloshinovskiy K.I.* Control of double mass system with direct current drive and output yaw .......................................................................................................................... 17  
*Gospodarikov A.P., Maksimenko M.V., Sidorenko A.A.* The computer system for the calculation of forecast displacements of a drift’s contour .......... 36  
*Kiselev D.N., Ershov Yu.A.* Microprocessor-based current protection ........................................... 43  
*Konstantinov A.V.* Work regulation as a tool of safety enhancement in terms of nazarovsky open pit mine ........................................................................................................ 50  
*Lyakhomskiy A.V., Petrov G.M., Kutepov A.G.* Control of two-mass system with a DC motor and change direction on the exit .................................................................................. 58  
*Markaryan L.V., Sel’nitsyna M.V.* Analysis and modeling of random material flow on mother collecting conveyor in a mine .................................................................................. 67  
*Nimetulaeva G.Sh.* Evaluation methods for occupational and environmental risks in occupational safety and health ............................................. 75  
*Pavlov D.A., Valuev A.M.* Organization of man-machine dialogue for the problem of scheduling of a complex of operations on a mining enterprise ........................................................................................................ 94  
*Pobegailo P.A.* Research of proportions of the working equipment of hydraulic excavators ................................................................................................. 107  
*Protasov S.I., Poklonov D.A.* Research of parameters of water jet GD-300 for optimization technological schemes of Jetting-dredge complexes .......... 115  
*Stashko K.V., Starikov K.A.* Improvement of dragline capacity by reduction in shoveling cycle .................................................................................................................. 121  
*Tomilin A.V., Lyapin D.G., Baranova M.A.* The use of computer modeling for effective elastic moduli Geomaterials strongly correlated with the orientation of the structural and textural components in the space in the underground construction .................................................................................. 127  
*Tyurin S.I.* Improvement in operating efficiency of mining equipment by introduction of new repair techniques ............................................. 136  
*Yakovlev A.L., Savenok O.V.* Analysis of the effectiveness of the equipment used and the possible causes of failure in intensification of oil production in the fields of the Krasnodar Territory ..................... 149  

**Earth sciences**

*Azev V.A.* Formation of complex system of planning and organization of production in coal production associations ............................................. 164
Belyaev V.V., Yutyaev A.E., Agafonov V.V. Decision-making algorithm on modification of mines within a coal mining company..........................173

Velikosel`skiy A.V. Regularities of management system performance and development in a coal mining company .......................................................180

Galiev Zh.K., Galieva N.V., Tupikov A.D. Economical and theoretical aspects of effective functioning of the enterprises in the market environment.................................................................187

Gal`perin A.M., Cheskidov V.Y., Borodina Yu.V., Demidov A.V. Study non-stationary hydrogeomechanical processes in clay rocks .................................195

Gromov E.V., Belogorodtsev O.V. Feasibility study of efficiency of modernization from the transport mine schemes to alternative transports (case study of the Kukisvumchorr deposit, level +170 m)..................206

Inshakov V.Yu. Analysis of effect exerted by lifetime of access drives and facilities on economic performance of open pit mining at thick lignite deposits .................................................................218

Karamanits F.I., Gromadskiy A.S., Goncharenko G.G., Prokopchuk K.L., Chepela O.S. The method of horizontal and slightly inclined underground workings driving using compensation blast-holes and bore-holes .................................................................................228

Kulak V.Yu. Development of production system in the coal mine phased design and management processes companies .......................................................238

Lozovskaya Ya.N., Demekhin M.S. Development of domestic market of coal by means of increase of reliability of its deliveries to consumers ........248

Raimzhanov B.R., Muhitdinov A.T., Khasanov A.R. Research of the intensely-deformed condition of a file of rocks of a deposit charmitan, technologists of working off of stocks of the bottom horizons influencing a choice .................................................................................................282

Romanov V.V., Mal`skiy K.S., Dronov A.N. Application of seismic vibration records in studies of mass blasting effect on excavations in mines .......293

Samusev A.L., Minenko V.G. Influence of chemical—electrochemical leaching parameters on gold recovery from rebellious minerals ..................301

Sekisov G.V., Rasskazov I.Yu. Research and production organisation for the establishment and implementation of innovative technology development fields mineral ..................................................................................309

Senkus V.V., Ermakov A.Yu. Development of process flow diagrams for top coal caving in thick gently-sloping seams ...........................................319

Senkus V.V., Ermakov E.A., Senkus Val. V. Evaluation of optimal depth for the transition from open pit to underground mining in coal extraction with the hybrid method and concurrent mined-land reclamation........328

Sidorenko A.A., Sidorenko S.A. Effectivity evaluation of high-performance longwalls in coal mines.................................................................337
Sokolov I.V., Antipin Yu.G., Baranovskiy K.V. Economic-mathematical modeling of underground geotechnology deposits of quartz.................. 346
Tomilin A.V., Khalkechev R.K. The mechanism of destruction of the pillars of salt given the presence of structural and textural compo-
nents in space .................................................................................................................. 357
Fedorov A.V., Romashkin Yu.V. Management of coal reserves prepared for open pit mining for optimization of operating costs at SUEK.......... 364
Cherechukin V.G., Lyubomishchenko E.I. Theoretical research of the volatile matter exit effect on the concentration limit detection of the coal dust explosion risk........................................................................................................... 380
Chernyshov A.V. Double yielding support with concrete cushioning in stopes .................................................................................. 386
Cherskikh O.I. Expansion strategy and parameters for an open pit coal mine .................................................................................. 392
Yutyaev A.V., Agafonov V.V., Belyaev V.V. Assessment thresholds in the development of technologies of a coal mine ...................... 401

Works of young scientist

Tatarinova O.A. Opening scheme of mine fields for priority develop-
ment Tersinskogo geological and economic district of Kuzbass .......... 408
