Technical science

Alferova E.L., Lugin I.V., Kianitsa L.A. Simulation of airflow disturbances to movement of trains in double-track tunnel underground ............13

Gusev D.O., Ryabov L.P. Use CASE technology for creating business process simulation model in the mining industry ........................................19

Krasuk A.M., Kosyh P.V. The interaction of a tunnel fan with airflow disturbance in the metro .................................................................32

Lyashenko V.I., Dyatchin V.Z., Franchuk V.P. Improving the efficiency and reliability of the vibrating grizzly feeders, screens and GIC-type cranes for mining industry .............................................................48

Maslennikov S.A. The question of design secured upright trunk in complex mining and geological conditions ..........................55

Matvienko N.G., Radchenko S.A. New opportunities for improving the forecast of areas of high gas emission from coal seams ..........64

Mendebeaev T.N., Smashov N.Zh. Bicameral face hydraulic machine for well drilling .................................................................74

Petrov A.E. duality of networks for computer-aided design systems with variable structure .................................................88

Petrov G.M., Kutevov A.G. Analysis of the touching incidents to emergency equipment in TN electrical network system with deadly earthed neutral up to 1 kV .................................................................98

Terekhin E.P., Bulgakov I.S., Chertova E.P. Improvement of equipment on the pulp preparation, hydraulic transport and warehousing of tailings ferruginous quartzite in the KMA mining companies .........104

Earth sciences

Busyrev V.M., Churkin O.E. Assessment of reserves value and efficiency of man-made deposits development ........................................113

Buyalich G.D., Buyalich K.G., Umrikhina V.Yu. Calculation of fluctuations in secondary roof collapses .............................120

Bykadorov A.I., Larichkin P.M., Svirko S.V. The speeds of subsidence changing and horizontal displacements of an undermined daylight surface by the high-speed stopes of Kuzbass .................................135

Volkov A.V. Classification of rhythms of social and economic development for analysis and forecast of environmental management cases .......147

Zelenin M.Yu., Khabibulin V.R., Guchenko D.E., Baron V.L., Ganopol'skiy M.I. Blasting for directed collapse of a reinforced concrete pipe with a height of 150 m in Izhevsk (Udmurtia) ..................160

Zimbovskiy I.G., Gapchich A.O. Research thermomorphic modified copolymers as selective collectors in the flotation of refractory gold mineral raw materials ...............................................................169
Karatygin D.A., Fomicheva O.E., Kharakhan O.G. Intellectual system for support specialist personnel management staff, based on fuzzy sets .......................................................................................................................... 177
Korzhov M.S., Savon D.Yu. Innovative approach to industrial cultivation and preservation of aquaculture Azov-Don basin ........................................... 186
Korobova O.S. National contribution of Russia to climatic regulation ....... 192
Krapivskiy E.I., Minnegulova G.S. The methodology of parameters of transportation mixtures of liquefied hydrocarbons of low temperature pipelines ........................................................................................................ 201
Kupriyanov V.V. Conceptual principles for systems problem solving ........ 211
Lugin I.V., Krasyuk A.M., Pjankova A.Yu. Determining the size of soil massif exposure to thermal influence of underground subway stations ... 220
Mikhina T.V. Economic mechanisms of management of occupational risks ......................................................................................................................... 229
Myaskov A.V., Popov S.M. Methodical guides to shaping trends of using mineral components of mining waste ........................................................................ 239
Nguyen Duyen Phong Elasto plastic model massif rock, take into account changes strength of rocks around the development for the calculation crepe distilleries subway in complex geological conditions .................... 250
Nifontov A.I., Kushnerov Yu.P., Chernikova O.P. Efficient remuneration system as motivation factor for mine personnel ............................................. 259
Oleynik P.P. On the Question of the Needs to Implement the Module of Description Finishing Processes for the Information System of Economic Production and Energy Cluster for Coal Industry .................. 270
Romanov V.V., Mal’skiy K.S., Aleksandrova Yu.V. Energy parameters calculation method of blasting for underground mining ......................... 277
Sagdieva R.K., Talovina I.V., Vorontsova N.I. Modern views on the formation of nickel weathering crusts of the ultrabasic massifs in the Urals .......... 288
Sayyidkasimov S.S. Classification of rhythms of social and economic development for analysis and forecast of environmental management cases ........................................................................................................... 309
Samigullin G.Kh., Nazarova M.N., Samigullina L.G., Yusupov G.A. Evaluation of distortion of the metallic elements of oil and gas facilities with mini-sample method ................................................................. 320
Sokolov S.M., Maslov V.A. Method for improving the efficiency of the froth flotation process using optical feedback ................................................. 331
Stepanyuk N.A. The management of landscapes into account of the principles environmental management ................................................................. 337
Fedorov A.M., Ryabov L.P. Overview of methods for detection, calculation and analysis of country’s sectors measurable indicators ................. 343
Frankevich Zh.A. Economic evaluation of reliability of the underground facilities ........................................................................................................... 353
Chernyshov A.V. Support—controlled caving system for stope stability ...... 359
Shulyupin A.N., Chermoshentseva A.A., Konstantinov A.V. On calculation of characteristics of a layer of supply of steam-water wells using measurement data on a wellhead .................................................................367

Works of young scientist

Buraeva A.E. Study aspects of the application of artificial intelligence in the digital production of jewelry .................................................................380

Panov A.V., Skulkin A.A., Tsibizov L.V., Rodin R.I. In situ stress evaluation by solving inverse problem based on hydrofracturing stress measurements..................................................................................387

Chapanov I.A. Geographic information routing system modeling at the mining enterprise on the logistic approach basis........................................396

Shcherbina A.A. Selecting a formalized approach to the optimization of the plan of repair and replacement of equipment in the gas industry ........404

Special editions GIAB

Pankratenko A.N., Nguyen Duyen Phong, Sammal A.S., Nguyen Xuan Man Research calculation multilayer lining tunnels, build in technologically heterogeneous massif rock .................................................................20

Stepanov I.S. Methods of analysis and evaluation of risks in systems of management of labor protection and industrial safety..............................136

Neradovskiy L.G. Theoretical-and-experimental estimates of amplitude attenuation in the high-frequency vertical magnetic dipole field components in frozen ground of permafrost zone in Yakutia ............240

The deposited manuscripts

Fomenko N.G. Geological support to the dumping of dry piles of rocks on the hydraulic mine dump «Lanny Naric» in Kuzbass.................................65

Voronin A.A. New way of drainage open-pit berms to improve their sustainability .........................................................................................105

Melnichenko A.M. International experience in mining technology improvements for steep deeping narrow ore bodies.........................................187
